

Case Study

SINGLE AND DOUBLE WING SLIDING AND PASS DOORS, THE KEW EYE TOWER, BRENTFORD, GREATER LONDON

Our Client Yuanda, found Bauporte Doors UK Ltd to undertake full design, manufacture and installation of its requirements.

Bauporte developed a very strong stainless steel framework construction around the door, to support the façade. Something we already have done for Gartner at 20 Gresham street. With our design the Bauporte doors became an integral structural of the Yuanda façade.

Yuanda's client Barratt was creating its new office at Wallis house, Brentford and was looking on the market for a stunning main entrance, which should work effortlessly. Bauporte offered its high level of quality and design and installed two sets of FV double swing doors Model BDD2 1A. Behind these doors a very rigid structure was created with a "Overload" driven double wing Elegance Sliding door B502.

The unique combination here is the stability of our entrances in combination with the unique transparent design and underfloor hidden operators.

Bauporte certainly pushed the boundary again on this project. The performance of Bauporte and the quality of the doors for Yuanda have made there decide easy to work together on a further four projects in London.
